Pentagon Signs AI Deals with 7 Tech Giants

The Pentagon reached agreements with seven leading AI companies — SpaceX, OpenAI, Google, Microsoft, Amazon, and others — to use their AI on classified military systems. Notably absent: Anthropic, which has been feuding with the Pentagon over AI misuse guardrails regarding surveillance and autonomous weapons. This marks a major escalation in military AI integration and comes amid the ongoing US-Iran conflict. McKinsey separately reports enterprise clients are getting \$3 back for every \$1 spent on AI. The Musk vs Altman trial took a dramatic turn with a courtroom clash over AI extinction risk.
